## **DETAILED ACTION**

### ***Response to Amendment***

1. In response to the amendment filed 8/15/2003, all necessary changes to the claims have been entered.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims 1-5, 7-11, 13-21, 35-44, 46-58, and 60-61 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Objections***

3. Claim 46 is objected to because of the following informalities: it appears that in line 4 of the claim, “; and.” Should be changed to -- . --. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002

Art Unit: 3737

do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-5, 7-11, 13-21, 35-44, 46-58, and 60-74 are rejected under 35 U.S.C. 102(e) as being anticipated by Michaeli (US 6,328,694 B1).

Michaeli teaches in cols. 12-32, a method and system for assessing physiological property of target tissue (col. 12, line 32-35) including CNS tissue (col. 12, line 41-54) by the steps and structures for collecting acoustic data by using an ultrasound probe (101) that inherently includes ultrasound transducers; relating the acoustic data with a physiological property of the target tissue; and displaying the information on a display. Michaeli further teaches the steps and structures for quantitative measurements of tissue elasticity (col. 12, lines 40-41). All other limitations of the claims are inherently taught by the disclosure.
